

CAPSTONE PROJECT PRESENTATION

Football League Hub

Project workflow reference

A current-season football dashboard that brings league tables, fixtures, scorer races, full standings, official sources and personal themes into one simple experience. Suvadip's Content Studio supports supervised freelance sports-journalism drafts.

PROJECT TYPE

Football dashboard with supervised Gen AI

Current season only - Designed for demonstration and grading

User journey

The main dashboard is intentionally fast to understand. A visitor can move from a league overview to a full table or an official source in a few clicks.

01

Open hub

Landing dashboard introduces the current football season.

02

Choose league

Select Premier League, La Liga, Serie A, Bundesliga, Ligue 1, Champions League or ISL.

03

Review snapshot

See the top 10 table, upcoming fixtures and top scorers.

04

Open full table

Use Full table to view teams 1-10, then Next to see 11-20.

05

Verify source

Use official standings or fixtures buttons for the organiser page.

06

Personalise

Use Settings to choose Pitch Green, Royal Blue, Midnight or Red Matchday.

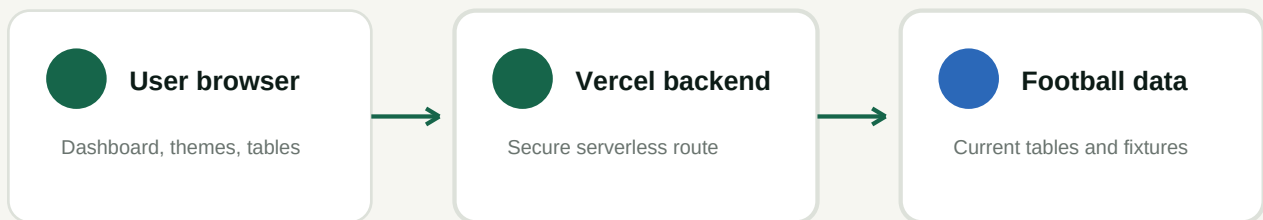

A SIMPLE 60-SECOND DEMO

Choose a league -> show the full table -> switch the theme -> open the official link.

This tells the grader exactly what problem the product solves and how the feature set works.

How the system works

The browser never stores the private football-data.org key. A Vercel serverless function acts as a small secure bridge between the dashboard and the data provider.

REQUEST PATH

1. Select competition
2. Request current season
3. Receive table and fixtures
4. Render dashboard

SECURITY DECISION

Keep the API key private

The key is stored as a Vercel environment variable. It is not put into the web page, source repository or visitor browser.

TRANSPARENT FALLBACKS

Labelled review templates

If Gemini is temporarily busy, Suvadip's Content Studio creates a clearly labelled fact-only template using the approved fact pack. Suvadip must review it before approval.

ISL is intentionally handled differently: the app presents sample data and links visitors to the official ISL site.

Data coverage and responsible use

The project focuses on the current season. This keeps the product free, direct and reliable for a capstone demonstration.

COMPETITIONS	IN-APP EXPERIENCE	RESPONSIBLE SOURCE
Premier League, La Liga, Serie A, Bundesliga, Ligue 1, Champions League	Current table, fixtures and full-standings pages	football-data.org through the secure backend
Indian Super League	Sample content and an official-source route	Official ISL standings and fixtures links
Every competition	Official standings and fixtures buttons	Normal external link in a new browser tab

COPYRIGHT-AWARE DESIGN

Original interface elements

The interface uses CSS, text initials and a standard football emoji. It does not include copied club or league logos, photos or videos.

WHY EXTERNAL LINKS HELP

Transparency for visitors

Official buttons make it easy for a user to verify a table or fixture at the competition organiser site without copying its content into this app.

Key features & future scope

Football League Hub is designed as a focused current-season football dashboard with transparent data, practical navigation and supervised content tools.

1

Current-season dashboard

League tables, upcoming fixtures and scorer views are brought together in one responsive football hub.

2

Competition coverage

Premier League, La Liga, Serie A, Bundesliga, Ligue 1, Champions League and an ISL sample-data view.

3

Full standings navigation

The dashboard remains concise while a dedicated page uses clear arrows to view teams beyond the top 10.

4

Official source links

Visitors can open official standings and fixture pages to verify information directly with competition organisers.

5

Personalised interface

An animated football mark, original styling and device-saved colour themes create a recognisable user experience.

6

Suvadip's Content Studio

Approved facts support reviewable freelance journalism drafts. Posting to the private Slack demo channel is optional and requires Suvadip approval plus confirmation.

FUTURE SCOPE

Add approved ISL live data, richer scorer details and historical seasons only if the data plan allows it.
